

SAFEGUARD

your patients with **THE** orthodontic fluoride-releasing and recharging primer

opal seal 
the ortho primer

The revolutionary 38%-filled Opal Seal primer releases and recharges fluoride.

opal seal

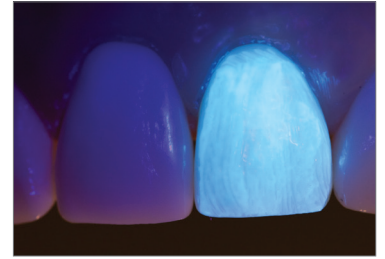

RELEASING AND RECHARGING FLUORIDE

Prime

- Apply in one step: quick, easy, and effective
- Substantial glass ionomer and nanofillers for optimal adhesion so you can bond with confidence
- Highly filled layer
- Nonyellowing formulation

Opal Seal primer is translucent after curing.

Opal Seal primer's fluorescing properties make it easy to remove under a UV black light.

Power Up

- Releases fluoride and recharges uptake
- Fluorescing properties are detectable under a UV black light to facilitate removal and reapplication
- Compatible with methacrylate-based bonding systems

METAL DENTO-INFUSOR™ TIP WITH COMFORT HUB

The soft fibers and metal cannula are ideal for applying a thin, even layer to etched enamel.

Patient treated with Opal Seal primer prior to bracket placement. Poor oral hygiene during treatment resulted in plaque buildup, bleeding gums, and other oral health issues. Brackets were removed, and teeth were cleaned with prophylaxis paste.

Opal Seal primer's esthetic, nonyellowing formula looks much more natural on the teeth than the leading competitor.
